

ROBBIE SWANSON

Lehi, UT • (385) 352-6048 • robbie.swanson2@gmail.com • [LinkedIn](#)

ML engineer turned Senior Product Leader. 5+ years shipping AI-native consumer mobile products, including the music industry's first ML filtering platform and a top-ranked family music streaming app. Self proclaimed and peer approved AI aficionado.

EXPERIENCE

Senior Manager, Music Products | Gabb Music Lehi UT & Nashville TN • 2024 – Present

- Drove 70%+ of company plan upgrades — tunedIQ became the #1 reason users purchased the highest-tier plan, directly attributable to product design, A/B testing, and GTM execution of the newly launched music streaming app.
- Built customer feedback infrastructure for the full team; identified core UX confusion in the player screen and like/dislike functionality, drove redesign decision, and shipped fundamental product changes in under 2 weeks.
- Made executive call to axe a near-finalized lyric partner that would have doubled catalog size — flagged that content quality was incompatible with the product's core safety promise, protecting brand integrity over growth optics.
- Diagnosed a critical billing bug via Mixpanel, shipped the fix, and confirmed resolution with live data — reducing subscription error rate by 90% for the quarter.
- Redesigned cross-functional QA protocol across engineering, web, and executive stakeholders, moving a high-stakes product launch more than one week ahead of schedule.

Technical Product Manager | Gabb Music Lehi UT & Nashville TN • 2023 – 2024

- Architected the music industry's first true safety streaming product: owned ML strategy for contextual filtering using NLP sentiment analysis, computer vision album-art grading, and billions of metadata signals — driving 1.8Million+ tracks into track-level filtration.
- Built the largest known human-in-the-loop ML training pipeline for album artwork classification in the music industry — classified 70K+ images to 99.9% accuracy, creating the first safety product built on copyrighted major-label data.
- Made Gabb Music the lowest CS-complaint product company-wide and #1 driver of plan upgrades — directly attributable to filtration quality and crash-rate improvements.

Product Manager | Market Turning Points (Fintech AI) Lehi, UT • 2021 – 2023

- Created GTM strategy for a new ML-powered stock optimization product — enabling institutional and retail investors to apply proprietary models to their own portfolios; achieved 55% higher customer adoption and 28% revenue increase at launch.
- Led a 5-person engineering team; shipped MVP in under 1 month with near-perfect on-time delivery — writing the playbook while executing in high ambiguity.
- Launched targeted campaign messaging the new AI forecasting feature & drove 200%+ increase in membership pre-orders within the first month, validating AI as the core acquisition hook.

ML Software Engineer | Market Turning Points (Fintech AI) Lehi, UT • 2020 – 2021

- Built the 0→1 AI forecasting tool that became the company's core commercial product — directly powering 40%+ YoY revenue growth.
- Engineered 100+ automated market chart visualizations powered by real-time financial APIs and proprietary ML cycle algorithms — delivering daily trading signals to 900+ institutional and retail investors.

PROJECTS

spokenstories.app | Voice AI / Personal Storytelling 2025

- Built end-to-end in 3 weeks using Claude, Bolt.new, ElevenLabs voice cloning, and Supabase — allows families to upload recordings of a loved one and hear personal stories in their voice.

SKILLS & TECHNOLOGIES

AI / ML: Claude Code, GPT models, Gemini, Cursor, Bolt.new, agent orchestration, MCP, ElevenLabs, NLP, computer vision, prompt engineering, human-in-the-loop ML, A/B testing

Technical Proficiency: Python, SQL, Firebase, REST APIs, streaming architectures, Supabase, PySpark

Tools: Jira, Confluence, Figma, Mixpanel, CleverTap, Google Analytics, Databricks, Azure DevOps

EDUCATION

B.S. Computer Science — Machine Learning Emphasis • GPA 3.9 Brigham Young University – Idaho

- President, AI Society; led 10-person SCRUM team to ship a neural network predicting US natural disasters in a 4-month agile sprint.
